Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stultz (US5073698) in view of Walk et al (US6614005).

Stultz discloses a light heating apparatus/method having a lamp (18) a casing (20) surrounding the flash lamp, a stage (Figure 2A), a power feeding apparatus (column 2, lines 60-63) for controlling emission of light from the flash lamp, a light transmitting window (Figure 2A), and a preheating lamp (column 3, lines 17-30). Stultz does not disclose a B/A which is greater than 1 wherein the radiant intensity is in a range of 220-370 nm. Walk et al discloses a high B/A and a radiant intensity of 350 nm (column 5, lines 55-60). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the radiant intensity and high B/A of Walk et al in the apparatus/method of Stultz because, a high B/A and radiant intensity of 350 nm is highly absorbed by the silicon wafer. Stultz in view of Walk et al discloses the claimed invention except a B/A greater than 1. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included a B/A greater than 1, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum value involves only routine skill in the art.
